

Your World Leader in the Removal of Gases, Odors, & Vapors

WE HAVE AN UPGRADED COUPON! The coupon test is the starting point that allows us to define the air quality problem. The coupon consists of a strip of copper and a strip of silver that is hung in the target room for 30 days. The coupon is then sent back to our in-house lab to test the corrosion on the copper and silver plates in order to determine which type of gases caused the corrosion and in what quantities. Armed with this actual data PureAir can craft a solution tailored to remove the actual gases causing the problem in the room.

This new design has a plastic strip above the metal strips so the metal strips are not accidentally touched by anyone handling the coupons preventing contamination. The new design also has a larger area on which to record the relevant information of Company, Location, Contact Name, Email, Install Date, Removal Date and type of installation-Industrial, Data Center or Preservation.

WE ARE PLEASED TO UNVEIL THE PUREAIR UPGRADED CORROSION CLASSIFICATION COUPON!!
